Filtration System Features

Tank-Within-A-Tank Construction Rugged tank is wound with miles of glass filament for extraordinary strength. Inside, there's another tank of sanitary plastic so your drinking water will never touch the fiberglass interior surface.

Exclusive Composite Valve Uses advanced NORYL™ composite material to enhance dimensional integrity and protect valve from expansion or shrinkage due to pressure and temperature demands.

Electronic Timer

Simple yet versatile controls. Set it and forget it; enjoy an unlimited supply of filtered water.

Power Outage Recovery If power is lost, the TC Series will automatically recover and complete the process once power is restored. This feature ensures that all scheduled regeneration cycles are never missed, and that filtered water is always available.

Powerful High Torque Motor Self-lubricating and with power to spare, for maintenance-free, long life operation.

Large Porting & Internal Piping The TC filter provides generous water flow rates.*

Manual Regeneration Tab A simple push of the tab starts a complete regeneration cycle giving you extra treated water if and when needed.

Automatic Bypass During Regeneration Eliminates the inconvenience of being without water.

NOTE: Tank size and local water pressure will affect the unit's operating flow rate.

CALIFORNIA RESIDENTS ONLY

Please note that your state certification information for this product is described on the back of the sheet.
